
The Audi Auz1z3 Code Calculator is a graphing calculator that can be used for solving math problems. It comes with the standard features of most graphing calculators, such as $y = mx + b$ functions, trigonometric functions, logarithmic functions, different plot types (e.g., scatter plot), and more. It also includes an automated graph layout feature for better looking graphs on the screen at any size. The Auz1z3 Code Calculator is intended for the education of students in the elementary through high school levels. The Auz1z3 Code Calculator is a graphing calculator that is used for solving math problems. The Auz1z3 code calculator has an automatic graph layout feature that can organize and graph equations into grids with colored borders to improve the look of the graphs. It also offers many mathematical functions, such as:

The graphing interface uses algebraic syntax similar to other popular Infiniti products such as the Infinity PC Algebra and Calculus and Infinity Scientific and Technical Software (SAS). The Auz1z3 Code Calculator has a powerful, built-in programming language that allows users to program it for a variety of tasks. The calculator can be programmed using commands found in the user manual, and programs can even access the calculator's functions and variables. The Auz1z3 Code Calculator has a large screen with a high resolution, which is approximately equal to 80 characters per line. This means that there is ample room on the screen for labels when creating graphs from equations. It also comes with an automatic graph layout feature that arranges graphed equations into grids with colored borders to improve the look of the graphs. The Auz1z3 Code Calculator uses Infiniti's new 4th generation user interface, which is more similar to the familiar text editors found on Windows operating systems. It has a more intuitive feel, with the addition of drag and drop, overlapping windows, and more. It also has an updated font design that can be scaled larger for easier viewing on smaller screens. The standard font size on the screen is approximately 7 point font. The Auz1z3 Code Calculator has a special graphing mode that can draw pictures that appear on math word problems in textbooks or homework assignment sheets. This feature is intended for use by students in the elementary through high school levels. The Auz1z3 Code Calculator uses Infiniti's new 4th generation user interface, which is more similar to the familiar text editors found on Windows operating systems. It has a more intuitive feel, with the addition of drag and drop, overlapping windows, and more. It also has an updated font design that can be scaled larger for easier viewing on smaller screens. The standard font size on the screen is approximately 7 point font. Multi-line graphing makes it easy to view multiple lines of data at once. It also offers two different plot styles (e.g., scatter plot).
